RISK & HAZARD MANAGEMENT

Knowing your risks is important, but it's how you react that is critical

Australian businesses have been leading the world in how they manage risk, but we cannot get complacent. Change is ever present in our operational processes and it is this very change that most commonly introduces risk back into our workplace.

It's vital that we not only understand what the risks and hazards are within our operations, but also what are we doing to proactively mitigate and control these risks. These responses are what keep people safe from harm.

SafetySuite Risk & Hazard Management delivers you the ability to provide this process to your business in a manner that is both simple and automated. Uncluttered screens guide the user through the tasks needed to record and measure a hazard, but also make it easy to set up the subsequent response of

implementing controls and delegating corrective actions to the extended team.

Workforce Engagement

SafetySuite allows your extended workforce of employees and contractors to capture the details of a hazard quickly on their mobile device and notify the business for a rapid response. Take a photo, enter some text, hit submit and the job is done. Workers are happy to perform these simple tasks when it takes only 2 or 3 minutes. Its quick and effective, and not disruptive to their role. You can see the App in the image below.

Drive Accountability

As we come to better understand the hazard, its gets assessed, recorded with a date delimited risk ranking and a series of corrective actions are assigned to immediately manage the situation. As SafetySuite is fully integrated into your SAP enterprise applications, we can ensure the tasks are sent to the correct employees, and track their adherence to the priority and expected completion dates that have been set.

Line Management will be able to see the tasks set to them personally as well as those for their team and the progress and status of each. SafetySuite ensures this is a closed loop system where individual accountability for workplace safety is a feature and not left to chance.

Solution Extensibility

As part of an integrated solution, SafetySuite Risk & Hazard Management will ensure other key business processes such as Health Monitoring and Proactive Safety Initiatives are all coordinated. Together they provide a systematic approach designed to mitigate risk and ensure that your commitment to Zero Harm is underpinned by a robust management system.

A comprehensive solution to underpin your AS/NZS ISO 31000 Management program

NOTIFICATIONS

Get the right team involved.

As the risk is identified, a range of people must be notified in order to ensure an appropriate response. SafetySuite Risk & Hazard Management is able to read the SAP Organisational Structures or distribution lists directly to determine the managers or specialists that need to be involved.

Notifications and tasks can be sent by email to the employee with detail in the body of the email (handy for reading on your mobile phone) or in a comprehensive formatted Adobe form. Its good to have options.

PROCESS EFFICIENCY

Constant Monitoring to ensure compliance.

When your team is tasked with a range of activities to analyse and treat a risk, it's vital that each task is completed both effectively and in a timely manner. SafetySuite will allow you to track these tasks for completion and escalate them when they are out of compliance.

SafetySuite Risk & Hazard Management comes with a library of standard process based reports to assist with the monitoring of internal SLA and overall compliance. Average and targeted times for all aspects of the hazard management process are tracked.

Examples include the time from:

- Notification to first response
- Completion times of actions
- Effectiveness and outcome
- Overall process compliance

MOBILITY

Engage your extended workforce.

Workplace safety legislation requires that you treat all workers the same, so our mobile solutions for hazard identification helps to ensure employees and contractors can participate in the process regardless of their access to your network and systems.

PROGRAMMATIC APPROACH

Plan a safe work environment.

ISO 31000 requires a robust management system to be in place to support your risk processes, and SafetySuite is designed to be your IT solution to underpin it all. With our native integration into SAP, SafetySuite has access to all your people, plant, material and equipment data to bring together a comprehensive view of risk. Our modules work in unison to ensure you can identify, analyse, evaluate, treat and monitor risks in your workplace.

REPORTING & ANALYTICS

Make decisions based on fact.

The standard reports delivered as part of SafetySuite Risk & Hazard Management are one of its key strengths. We provide a huge catalog of transactional and KPI reports that will ensure you can find the information you need to service the needs of your people managers and legislative requirements.

Additionally, our Dashboarding tools provide you with the key statistical reports that are commonly required. These dashboards can be enhanced and new ones created to fully suit the requirements of your business.

EXTEND RISK & HAZARD MANAGEMENT WITH OTHER SAFETYSUITE PROCESSES

- Incident Management
- Health Management
- Proactive Safety Initiatives
- Workers Compensation
- Rehabilitation
- General Claims

STANDARD SAP INTEGRATION

- SAP Human Capital Mgt
- SAP Organisation Mgt
- SAP Plant Maintenance
- SAP Enterprise Asset Mgt
- SAP Security & Access
- SAP NWBC

SafetySuite Risk & Hazard Management

Common Challenges

- Record hazards as they are identified
- Eliminate manual systems
- Process transparency
- Data visible at site and head office
- Learn from your mistakes – continuous improvement
- Ensure corrective actions implemented
- Compliance to Australian & New Zealand standards

Key Features of our solution

- Mobile App for Hazard Identification
- Web based user interface
- Standard, proven business processes – not just a database
- Consistent approach to managing risk
- Native integration into SAP
- Comprehensive library of dashboards and detailed reports

Business Value

- Ensure operational continuity
- Automation of manual processes
- Best in class reaction to workplace risk
- Centralised, consistent data
- Low cost IT solution
- Rapid implementation
- Compliance to workplace safety legislation

Standard Implementation

- Our skilled consultants can have this module up and running in your SAP system in just 5 weeks under normal circumstances.
